Synaptamine™

Synaptamine™ is a patented neuroadaptagen that incorporates a nano-sized technology which provides greatly accelerated absorption by the body. A "neuroadaptagen" is a natural substance considered to help the nervous system adapt to stress and to exert a normalizing effect upon bodily processes. As a neuroadaptagen, Synaptamine™ is recommended for optimal brain health, enhanced energy, reduced stress as well as helping nutritional maintenance of overall mood, health, and a sense of well-being.

Who should consider taking Synaptamine™?

Synaptamine™ is prescribed as part of a balanced program of treatment directed at stabilizing brain chemistry related to Reward Deficiency Syndrome (RDS). RDS is a condition characterized by low or inadequate levels of dopamine, a neurotransmitter, in the midbrain. Dopamine levels may be low as a result of acquired conditions due to high levels of **stress, chronic pain or depression**. There is growing research that indicates Synaptamine™ may be helpful in chronic pain, including fibromyalgia.

Low dopamine levels may be genetically driven due to variants in a person's DNA that make it difficult for a person to maintain "normal" levels of dopamine. It is believed that many medical conditions are associated with an underlying dopamine deficiency including ADD, OCD, fibromyalgia, PTSD, and certain anger disorders as well as chemical addictions and behavioral addictions such as gambling and binge eating. If you have a family history of any of these RDS conditions, you may be at increased risk for low dopamine. Your physician can perform genetic tests that may indicate predisposition to RDS which may predict your potential to respond to Synaptamine™.

Synaptamine™ is particularly helpful in reducing cravings associated with chemical withdrawals such as quitting smoking, or withdrawing from alcohol or opioids, including tapering off Suboxone™. Synaptamine™ is currently under study as a stand-alone treatment for acute opioid withdrawal. It has also been shown to reduce the cravings associated with addictive eating behaviors and binge eating.

Dosing Synaptamine™

When advised to take Synaptamine,™ please following dosing instructions provided by your physician. It is a liquid medication and should be taken on an empty stomach and first swished around the mouth to facilitate digestion. The usual dose is 1/2 oz. (1/2 capful) twice a day. It is sometimes necessary to increase the starting dose to see results but in most cases results will be perceived within the first 1-2 weeks. Synaptamine™ is a proprietary blend of natural substances and is rarely associated with any side effects which, when they do occur, are very mild and transient. It is non-addictive.

For more information:

Please contact Dr. Ehlenberger at Accurate Clinic. Additional information including access to research publications can also be obtained online at:

Purchasing Synaptamine™

Synaptamine™ is considered a "medical food," and as such must be purchased through the recommendation or prescription of a physician. Based on Dr. Ehlenberger's recommendation, it may be purchased directly at Accurate Clinic or it can be purchased online. The price is the same either way: \$69.50 for a one month supply at usual dosage.

If you wish to purchase Synaptamine™ online, please navigate your browser to this web page:
